We switched on prompt caching and the bill stayed high, so we assumed the feature was overhyped until we realized that cache_read_input_tokens was sitting at zero the whole time because a timestamp lived above the breakpoint. ...more
Prompt Caching: The Breakpoint Rule
Place it above volatile content
WRONG: Breakpoint below volatile content
SYSTEM (static)
USER MESSAGE
2026-06-16T14:02:11Z
cache_control
Hash changes every request
No cache hit
Pays full price
RIGHT: Breakpoint above volatile content
SYSTEM (static)
cache_control
USER MESSAGE
2026-06-16T14:02:11Z
Identical prefix cached
Cache hit
Reads at 0.1x price
VERIFY IT WORKS:
Check: cache_read_input_tokens > 0?
YES → Cache is working at 0.1x input price
NO → Prefix doesn't match (fix your breakpoint)

Felt this last week. Our agent kept reaching for a pattern we'd explicitly deprecated.
The graph insight is sharp—docs aren't just files, they're connected decisions over time.

Ben Valentin That deprecated pattern one is painful, the agent has no idea it's reaching for something the team already killed. It just sees a file that looks relevant and runs with it. Appreciate you sharing that, it's exactly the failure mode that pushed us to write this up.

Pre-Warming the Claude Cache With max_tokens: 0: How to Move Cold-Start Latency Off Your Users
AI Transfer Lab 6 min read · Jun 19, 2026
Cold Cache Hurts Someone. Pre-Warming Lets It Be You.
First request pays full price and slow time-to-first-token—unless you pre-warm correctly.
EMPTY CACHE
PRE-WARM WITH max_tokens: 0
The Hidden Gotcha: Breakpoint Placement
Pre-warm only works if the breakpoint is on the shared prefix, not on the throwaway message.
